Education

Stevens Institute of Technology
M.S. in Computer Science

Hoboken, NJ
Jan 2022 – May 2023

Mahatma Gandhi Institute of Technology
B.Tech in Computer Science

Hyderabad, India
Jun 2016 – Oct 2020

Experience

Harakumo
Full Stack Engineer

New York, NY
Jan 2024 – Present

- Built core platform infrastructure from pre-launch through public beta, owning end-to-end delivery of full-stack features in Next.js and TypeScript on serverless Cloudflare Workers (D1, R2, KV, Vectorize).
- Designed and built the multi-tenant authentication and authorization layer from scratch, including organization-level RBAC, API keys, and email OTP verification.
- Implemented Stripe billing end to end: subscriptions, Connect marketplace payouts, and webhook processing for payment lifecycle events.
- Shipped the public developer platform – SDK, CLI, REST API, and documentation – enabling external partner integrations at beta launch.
- Built core AI platform features running in production, including an AI gateway, agents, and vector/memory stores.

BibleWrite
Software Engineer Intern

New Jersey
Jan 2023 – Dec 2023

- Built Python and Node.js middleware integrating LLM APIs into production features, with React components streaming model responses in real time.
- Implemented request caching and payload optimization to manage API rate limits and reduce token usage.

Stevens Institute of Technology
Graduate Research Assistant (AI/ML)

Hoboken, NJ
Jan 2022 – May 2022

- Built Python data-processing pipelines and benchmarked classical ML against transformer models on standard NLP benchmarks, measuring accuracy and latency trade-offs.

Chanova Labs
Software Engineer (Intern to Full-Time)

Hyderabad, India
Jan 2019 – Dec 2021

- Shipped full-stack features across multiple client projects using React, Node.js, and Python REST APIs with PostgreSQL, including payment integrations, deployed to GCP via CI/CD.
- Converted from intern to full-time after a year building and testing consumer-facing Android interfaces.

Projects

SkolaOS – School Management Platform for Indian Schools

Next.js, MongoDB, Cloudflare

- Designed and built a multi-tenant school operations platform from scratch, spanning 11 integrated modules: admissions, student records, fee collection with receipts and dues, attendance, examinations and grading, timetabling, staff, notices, certificates, document storage, and analytics.
- Modeled the domain around a shared school record so modules compose rather than duplicate: admissions flow into the student register, attendance and exam data roll up into analytics, and certificates print from the record.
- Built for market-specific constraints: per-school tenancy, role-based access for administrators, teachers, and staff, INR fee structures with receipting and dues tracking, and targeted parent communication.

Skills & Interests

Technical: JavaScript, TypeScript, Python, React, Next.js, Node.js, REST APIs, Google Cloud Platform, Cloudflare (Workers, D1, R2, KV, Vectorize), MongoDB, PostgreSQL, Docker, CI/CD

AI & Systems: LLM integration, multi-agent systems, MCP, vector search, system design, microservices, event-driven architecture (Kafka, webhooks), OAuth2, RBAC, Stripe payments

Language: English, Telugu
